

50% more snow with Snomax®

2°C warmer start up temperatures

Marcus Hasler
(CEO)
Ropeways Brigels
Waltensburg
Andiast, CH

«My 8 years snowmaking experience and intensive cost analysis shows very clearly, Snomax® pays economical-ly, ecologically and from the view of the customer. Less energy and water consumption, lower emissions, better efficiency in marginal temperatures and an incomparable increase of slope and snow quality.»

Snomax® increases snow production **up to 50 %** at 2°C higher temperatures. The quality of snow and slope as well as the durability increased substantially. Less snow-making hours for slope and resort opening. Snomax® reduces the operating costs, the number of grooming machine hours and lowers the CO₂ and noise emissions. Snomax® reduces fuel and maintenance cost.

Snomax® is a natural substance and 100% bio-degradable. 100% usage authorized by the ministry of forestry and environmental protection of Switzerland 1998. Recommendation from micro-biological institute BioLink of Berne/Switzerland 1998, Prof. Dr. Richard Braun. Information from Swiss Ski Area Association, No. 2 / 1998.
